

IRFAN S

Self-taught 19yr old GenAI developer specializing in agentic AI systems, RAG pipelines, and LLM-powered backends. Proven ability to architect and deploy production-ready AI applications without a CS degree driven entirely by curiosity and a hands-on building approach. Experienced with LangChain, LangGraph, FastAPI, and vector databases. Seeking a junior GenAI / AI developer role at a startup.

WORK EXPERIENCE

Freelance Web Developer

Django Developer 2025 may - 2025 dec

- Portfolio Website — Video Editor Client - Designed and developed a client portfolio website from scratch - Delivered a production-ready site to a real client with django hosted in render , cloud

EDUCATION

IGNOU (Distance Learning)

BA English 2025 - 2028

- Currently in 2nd year | Expected completion: 2028

Iqbal HSS Peringammala ,Tvm

Class 12 — Science Stream (Physics, Chemistry, Biology, Maths) 2022 - 2024

PROJECTS

Enterprise RAG System with RBAC [🔗](#)

- Built a production-grade internal knowledge assistant with role-based access control — HR, Finance, Engineering, and Admin each see only their own data.
- Implemented Multi-Query RAG with Jina Reranker and BM25 hybrid retrieval for high accuracy responses.
- Secured with JWT authentication; deployed on Railway with guardrails for safe, hallucination-resistant outputs.

TARZ — AI Computer Control Agent [🔗](#)

- Engineered an AI agent that controls the user's screen in real-time — moves cursor, clicks UI elements, opens apps, and reads screen content.
- Solved accurate screen clicking using a custom grid method combined with a vision model, achieving reliable element targeting.
- Integrated RAG, vector DB, vision, TTS, and STT into a single cohesive agent pipeline; designed full system architecture.

AI Assistant with Long-Term Memory [🔗](#)

- Built a conversational agent with dual memory architecture: in-session memory + vector-based long-term memory across sessions.
- Deployed on Railway with streaming response support and a clean chat frontend.

Stargazing AI Tool [🔗](#)

- Created a curiosity-driven tool that streams GPS and orientation data from a phone to render a live star map on a laptop screen.
- Integrated an LLM layer so users can point at any celestial object and ask questions in natural language — no manual input required.

SKILLS

- LangChain, LangGraph, LLM , API, RAG, Multi-Query Retrieval
- Python, FastAPI, Django, JWT Authentication, Async/Await, REST APIs
- ChromaDB, PostgreSQL
- Computer Vision (OpenCV), PyAutoGUI, Screen Agents, TTS/STT
- Docker, Railway, GitHub, LangSmith
- HTML5, CSS3, JavaScript

CERTIFICATE

- Google AI Essentials 
- Hugging Face LLM & Agents Course 
- Anthropic Introduction-To-Model-Context-Protocol (MCP) 
- AWS Skill Builder – Genarative Ai with Amazon Bedrock 
- AWS Skill Builder – Foundations of Prompt Engineering 

LANGUAGE

- English Intermediate
- Hindi Intermediate
- Malayalam Native
- Tamil Intermediate

AWARD

CUSTOM SECTION

- Space, astronomy, science and curiosity – these directly influence the AI tools I build.
